RESEARCH SUMMARY

My work centers on generative AI and the validation problem underneath it, establishing whether a model's output can be trusted against ground truth rather than assuming it. My MSc dissertation, conducted in collaboration with XYNQ (UK), addressed a case where no real training data existed at all, building and statistically validating a synthetic data pipeline end to end. I am seeking a PhD position to apply advanced machine learning and data science methods to complex, real world problems.

EDUCATION

University of Aberdeen, Aberdeen, UK

January 2025 - June 2026

Master of Science in Data Science

Commendation

Dissertation: *Synthetic Data Generation and Model Validation* (in partnership with XYNQ)

Supervisor: Prof. M. Carmen Romano

Relevant modules: Machine Learning, Advanced Statistics and Special Applications, Image Analysis, Data Visualization, Introduction to Python and R

American International University-Bangladesh, Dhaka, Bangladesh

September 2019 - May 2023

Bachelor of Science in Computer Science and Engineering

Cumulative GPA: 3.99/4.00

Thesis: Benchmarked three model architectures (CNN, SVM, ensemble classifier) against one another to identify the diagnostic accuracy threshold for medical imaging classification, comparing failure modes across architectures rather than optimizing a single model in isolation.

Relevant modules: Artificial Intelligence, Algorithms, Data Structures

HONORS AND AWARDS

- **Academic Excellence Scholarship**, American International University-Bangladesh
- **Summa Cum Laude**, American International University-Bangladesh 2023
- **Dean's List**, American International University-Bangladesh (four semesters)

RESEARCH AND TECHNICAL PROJECTS

Synthetic Data Generation and Model Validation (MSc Dissertation, with XYNQ)

Aberdeen, UK

- Built a baseline dataset from prompt-engineered LLM outputs, then used CTGAN to modify it into a full synthetic dataset for fraud-detection use cases in music streaming, addressing a case where no real training data was available at all.
- Ran an ablation study across input features to identify which were most influential to model performance, using the result to determine which features to prioritize in the generation pipeline.
- Tested the scalability of the approach by training CTGAN on a 5,000-row subset of the baseline data and generating 100,000 rows from it, evaluating whether a small seed dataset could be reliably expanded.
- Validated the generated data against the baseline distribution using four independent statistical tests covering distinct failure modes: KS Distance (marginal distribution shift), Total Variation Distance, Spearman correlation (dependency structure), and Cramér's V (categorical association).
- Trained a Random Forest classifier on the validated synthetic data and tested it against held-out data, reaching an overall F1 score of 0.85 and ROC-AUC scores of 0.96, 0.93, and 0.89 across three fraud categories.

Lead Scoring and Sales Intelligence Pipeline

github.com/Tonmoy10/leads-score-sales-intelligence

- Restructured an exploratory notebook into a reproducible two-stage pipeline (train.py, score.py) with shared preprocessing, resolving feature misalignment between training and scoring passes.
- Tuned a Random Forest classifier to 0.95 precision and 0.88 recall, then applied K-Means clustering to separate converted leads into five behavioral segments, isolating a low-intent group that would otherwise have diluted the scoring signal.
- Used SHAP values to attribute each prediction to its dominant feature, converting the model output into a ranked, explainable list rather than an opaque score.

Customer Segmentation via RFM Modeling and K-Means Clustering

github.com/Tonmoy10/rfm-customer-segmentation

- Derived Recency, Frequency, and Monetary features from raw transactional data and corrected for right-skew using logarithmic scaling before clustering.
- Segmented the customer base into four behavioral groups via K-Means, identifying over 1,000 inactive accounts and a distinct high-value segment.

Job Market Trend Analysis via Cloud Data Warehousing and Power BI

github.com/Tonmoy10/job-market-pipeline

- Built an automated extraction pipeline against the Adzuna API, loading raw JSON into Google BigQuery and defining SQL transformations and automated tests using dbt.
- Constructed a Power BI dashboard to track posting volume, hiring activity by company, and salary trends over time.

WORK EXPERIENCE

Family Restaurant Business

Data & Operations Lead

Dhaka, Bangladesh

January 2024 - November 2024

- Analyzed sales and inventory data to inform stocking and scheduling decisions, reducing stock waste by approximately 30 percent.
- Designed and deployed a point-of-sale system to replace manual record-keeping, reducing daily administrative time by roughly two hours.

DeshiIT

Junior Software Developer Intern

Dhaka, Bangladesh

January 2023 - April 2023

- Restructured a MongoDB schema across more than 10,000 records, reducing query response times by approximately 40 percent.
- Built full-stack features using the MERN stack (MongoDB, Express.js, React, Node.js).

TECHNICAL SKILLS

- **Generative AI and Machine Learning:** CTGAN, synthetic data generation, scikit-learn, Random Forest, K-Means, SHAP, statistical validation (KS Distance, TVD, Spearman, Cramér's V)
- **Programming:** Python, R, JavaScript, Wolfram Mathematica
- **Data Engineering:** SQL, Google BigQuery, dbt, ETL pipelines, API integration
- **Visualization and Analysis:** Power BI, Tableau, pandas, NumPy
- **Tools:** Git, GitHub, MySQL, MongoDB, Google Cloud CLI

ENGLISH LANGUAGE PROFICIENCY

IELTS Academic: Overall Band 8.0

Listening: 9.0 | Reading: 8.0 | Speaking: 7.5 | Writing: 6.5

REFEREES

Prof. M. Carmen Romano

Professor, School of Natural and Computing Sciences

University of Aberdeen

MSc Dissertation Supervisor

E-mail: m.romano@abdn.ac.uk

Tanvir Ahmed

Assistant Professor, Department of Computer Science

American International University-Bangladesh, Dhaka, Bangladesh

Course Instructor, BSc in Computer Science and Engineering

E-mail: tanvir.ahmed@aiub.edu
